RELEASE NOTE

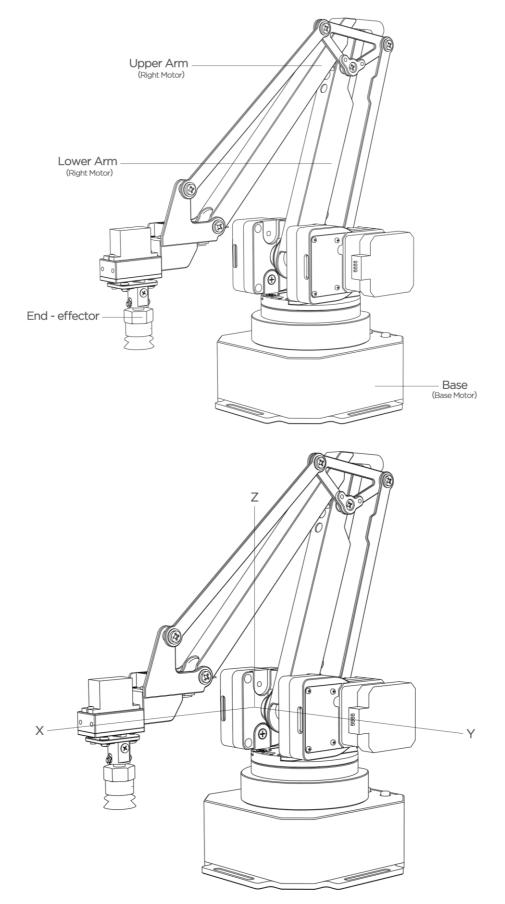

Safety Instructions

- 1. Please don't put your hands between the arms when uArm is moving.
- 2. Please use the official power supply for safety reasons.
- 3. Please clear a space for uArm, in case of knocking down anything.

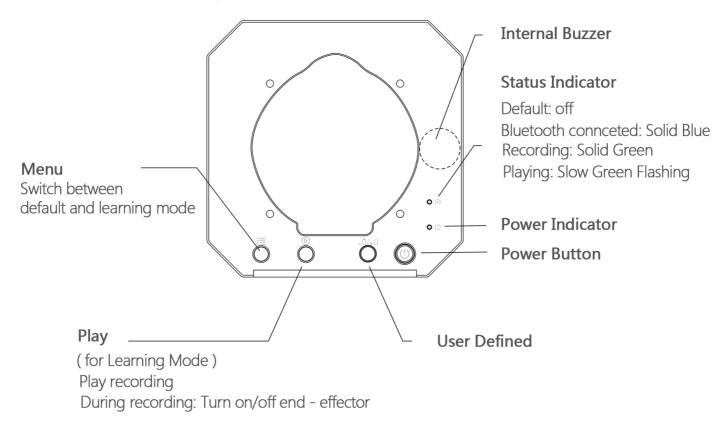

Product Overview

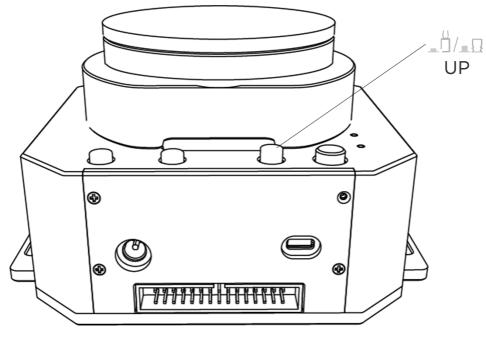

1. Reference Frame

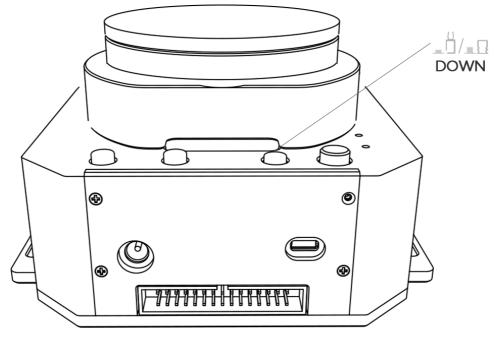

2. Buttons & Indicator Lights

Caution: By default, the user defined button is for switching between Bluetooth and USB mode. Please ensure the button is UP while communicating with uArm via USB.

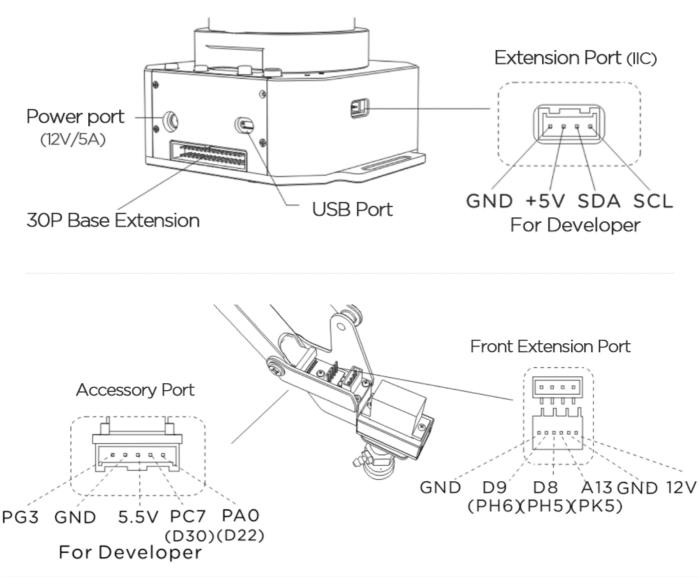

USB

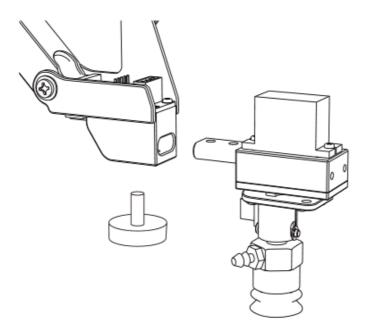

Bluetooth

3. Extension Description

Hardware Installation

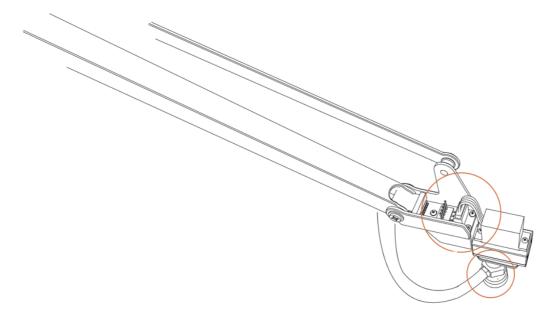

1. Suction Cup (Default)

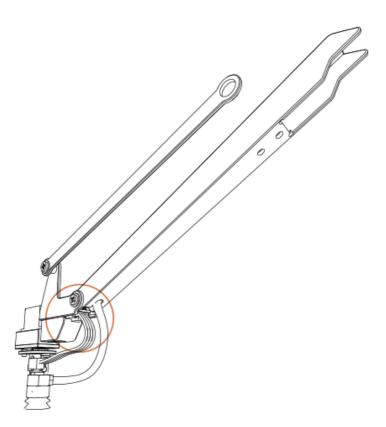

Preparation

Step 1: Install the suction to the end-effector and lock the nut tightly. Note: Similarly, if you want to uninstall suction cup, unlock the nut.

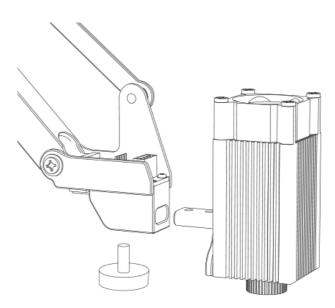

Step 2: Plug the wire of 4th axis motor, suction tube and limited switch

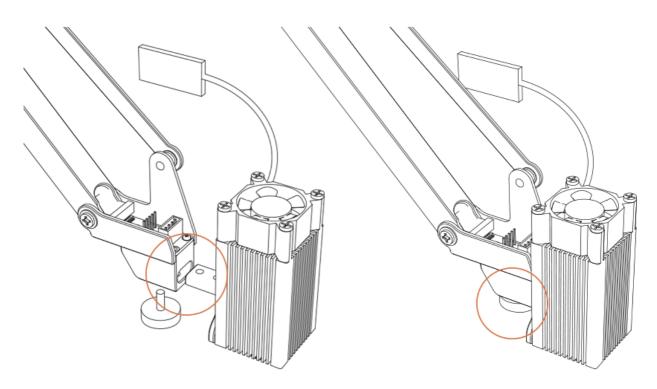

2. Laser

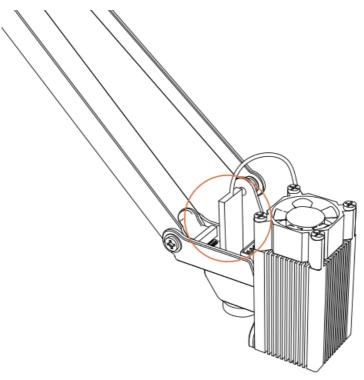

Preparation (Required Parts: Laser head, Thumb nut)

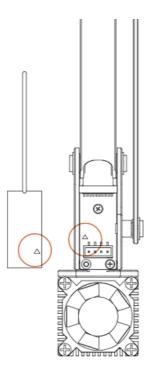

Step 1: Install the laser head and lock the nuts tightly

Step 2: Plug in the board of laser to the end-effector

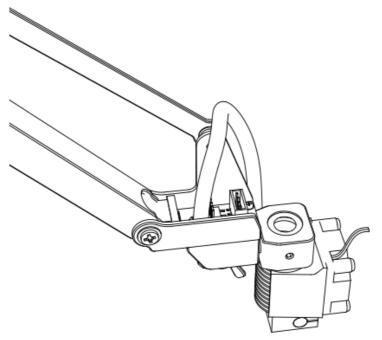

(Please pay attention to the direction)

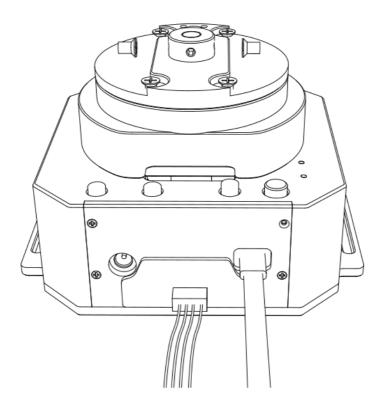

Caution: If the laser could not engrave the paper, please open the uArm studio and start the laser engraving, then focus adjust the lens of laser slowly. Please do not touch the light of laser during the engraving.

	0 0 0 0 0
\mathbb{Z}	

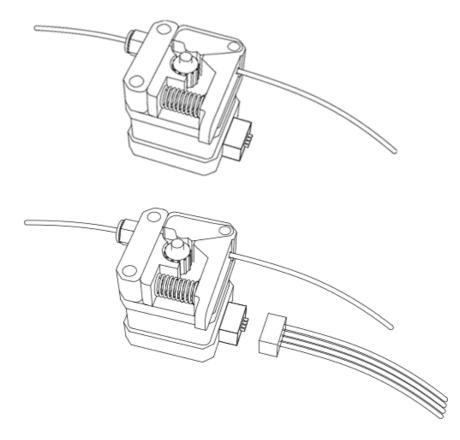

Step 2: Install the 3D printing feeding system

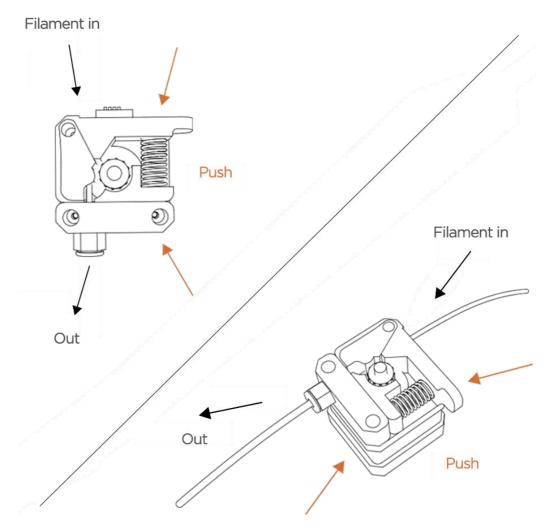

Plug in

Caution: Please ensure the connection is correct. Or the computer won't recognize the uArm Swift Pro (Connect the motor with the extension board with the 4-color cable).

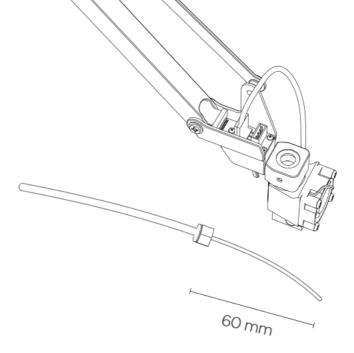

(Feed the PLA material we offered into the feeding system)

Step 3: Install the PTFE tube

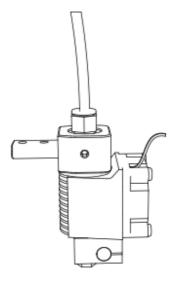

Feeding the filament and Installing the tube

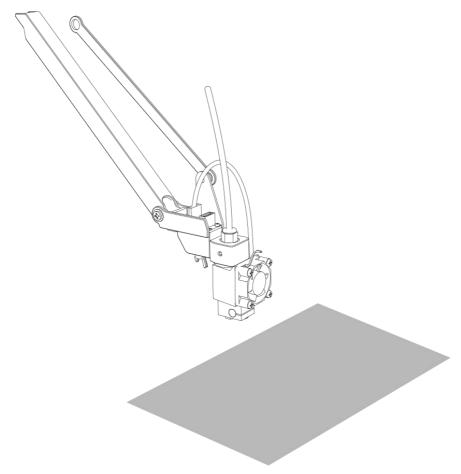

Step 4: Keep feeding the material until it's 60mm out of the other side of PTFE tube.

Caution: Sometimes the filament can't be extruded, that might be caused by the top of filament. If the tip is deformed during the cutting off, the filament won't go through the heat end successfully. Step 5: Install the tube to the extruder

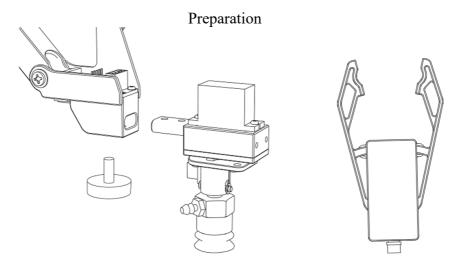

Step 6: Stick the masking tape on the table

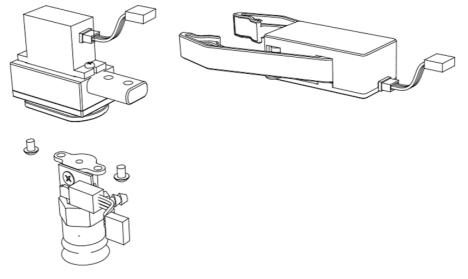

Caution: someone might get trouble with the not horizontal, please try to calibrate the arm following this \underline{link} .

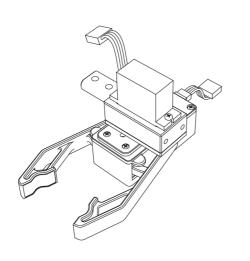

4. Swift Gripper

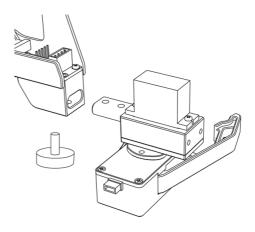

Step 1: Unscrew suction cup with the hex bar wrench.

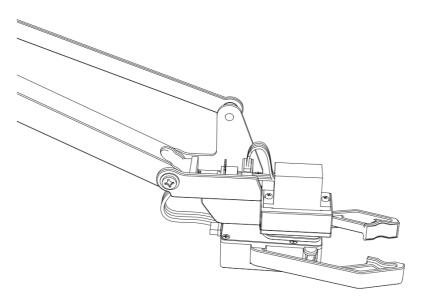

Step 2: Fix the gripper and lock the nut tightly

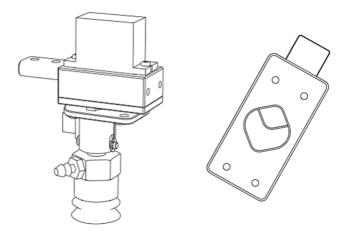

Step 3: Plug the 4th axis motor and gripper

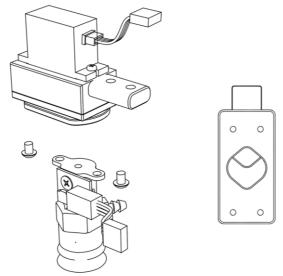

5. Swift Universal Holder

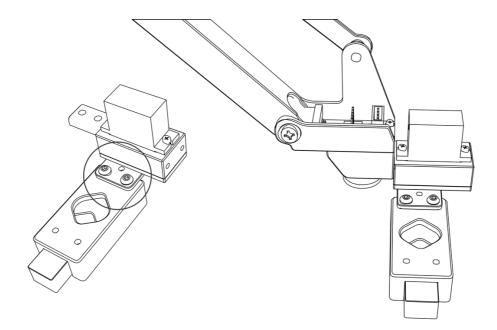

Preparation

Step 1: Unscrew suction cup with the hex bar wrench.

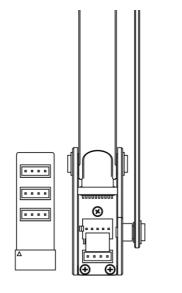

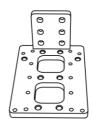

Step 2: Fix the gripper and lock the nut tightly

Step 3: Plug in the 4th axis motor

Seeed Grove modules is a series of different sensors which helps us to extend the function of uArm to a completely new level. We are offering two parts to help you to connect the uArm with Grove much more easily.

Grove Extension

Grove Mounting block

Caution:

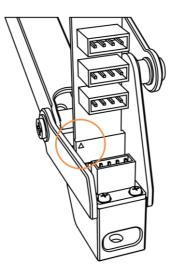

Grove extension for the uArm end-effector is just designed for(Step 1,2)

- PIR Motion Sensor
- Mini Fan Module
- Electromagnet Module
- Ultrasonic Ranger
- Other Digital or Analog modules.

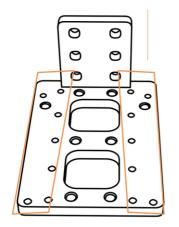

For the IIC module like: (Step 3)

- Temperature Sensor
- LCD RGB Backlight Module
- Color Sensor
- Gesture Sensor
- Other Digital or Analog modules.

Step 1: Plug in the Grove breakout and fix the grove module to the mounting block.

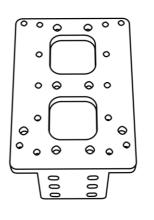

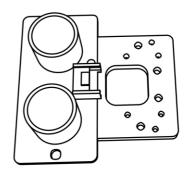

M2 hole for Grove/OpenMV

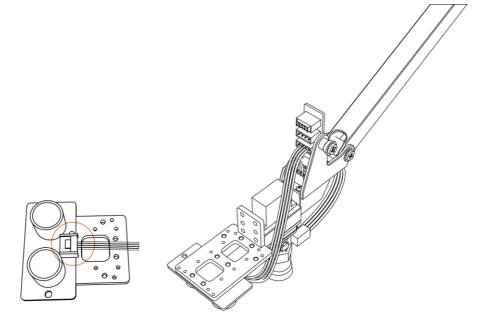

φ3 hole for end-effector

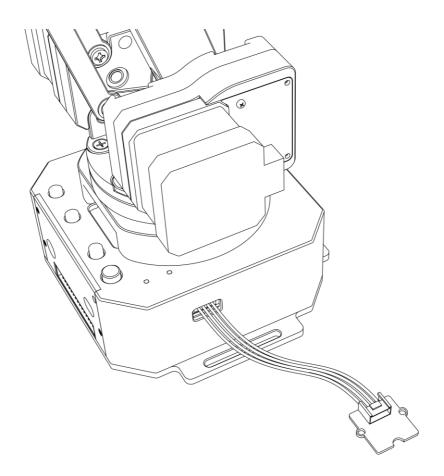

Step 2: Wiring

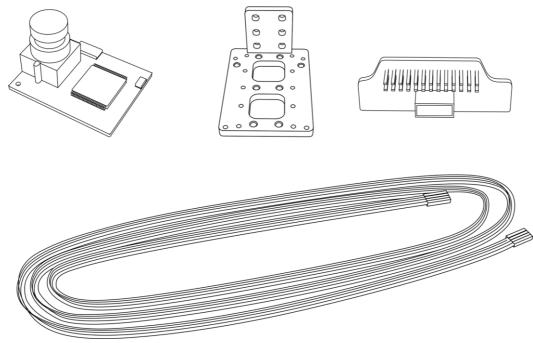

Step 3: For the IIC modules

7. OpenMV Module (the firmware should be 3.1.9 or later)

Preparation

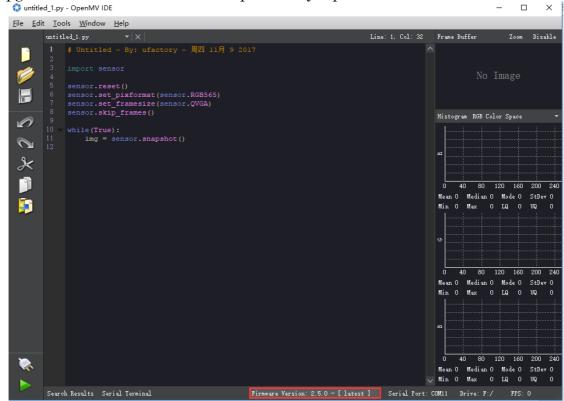

Step 1: Download the latest OpenMV IDE

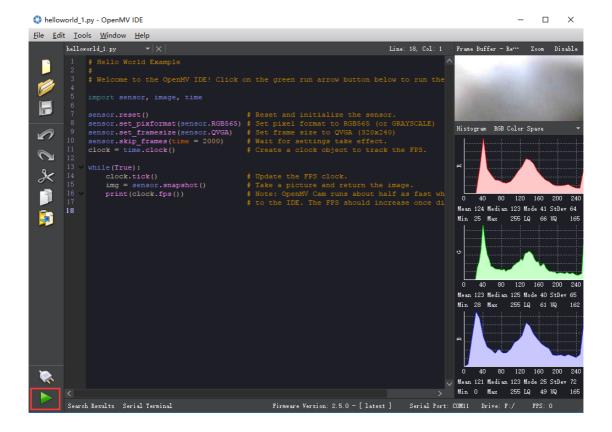

🔇 untitle	ed_1.py - OpenMV IDE			- 0	ı x

	Search Results Serial Terminal Firm	mware Version:	Serial Port: Driv		

(Download the latest OpenMV IDE from: <u>https://openmv.io/pages/download</u> and plug in the OpenMV camera to the computer , click the "Connect" button on the left bottom of picture)

Step 2: Upgrade the latest firmware to OpenMV by OpenMV IDE

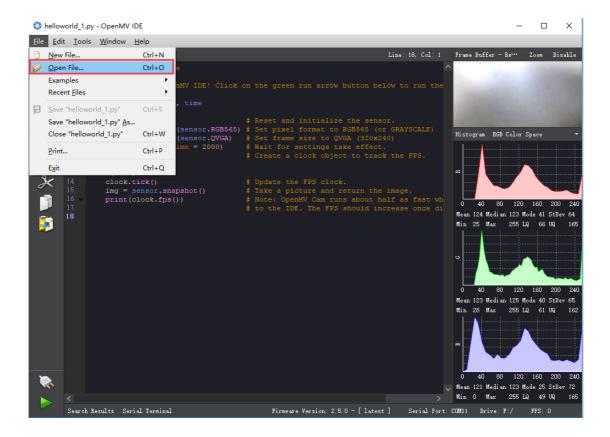

Step 3: Run the "helloworld.py" (By clicking the "play" button as image below) and focus the lens in the right window

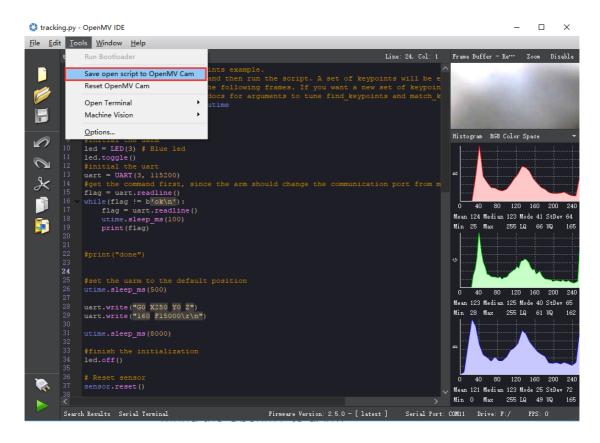

Note: After IDE get the video, then rotate the lens to finish focusing (to see the objects 20cm away) then tight the screw.

Step 4: Get the tracking.py code and save it to the OpenMV

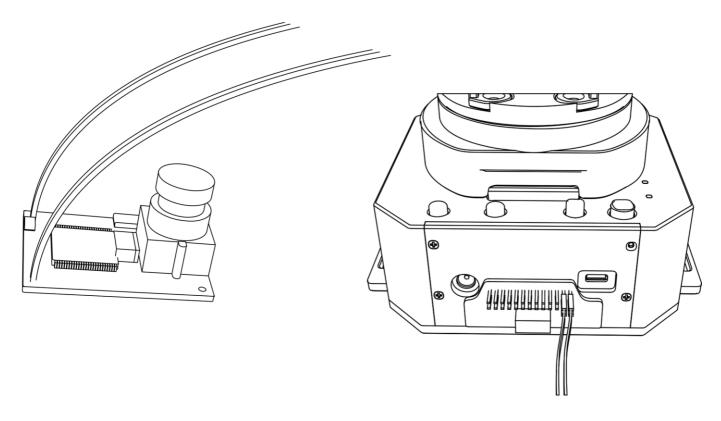

- (1) Download "tracking.py" from: <u>https://github.com/uArm-Developer/OpenMV-Examples</u>
- (2) Click "File" —— "Open File" to export tracking.py

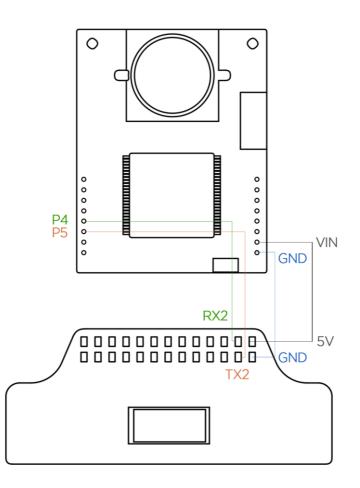

(3) Click "tool"——"Save open script to OpenMV Cam", after the code has been stored, restart the Open MV module(remove the USB cable form Open MV and then plug the USB cable to Open MV). If the code stored successfully, the LED on Open MV will be solid blue.

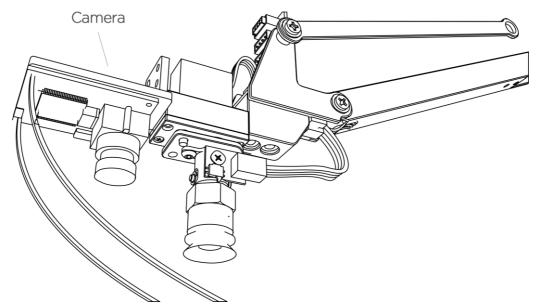

Step 5: Remove the USB cable from OpenMV module and wiring the OpenMV to uArm

Caution: Please ensure the connection is correct. otherwise the computer will not recognize the uArm.

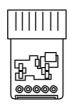

Step 6: Install the camera module to the end-effector

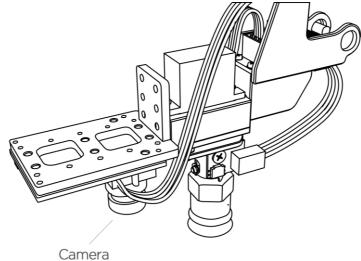

Note: Please pay attention to the assembling direction of OpenMV, or the arm will move to the opposite direction. And make sure the OpenMV is disconnected with you PC or the IDE will control the OpenMV.

Step 7: Keep the table clean and non-reflective and get something with a lot of details like a PCB with resistors.

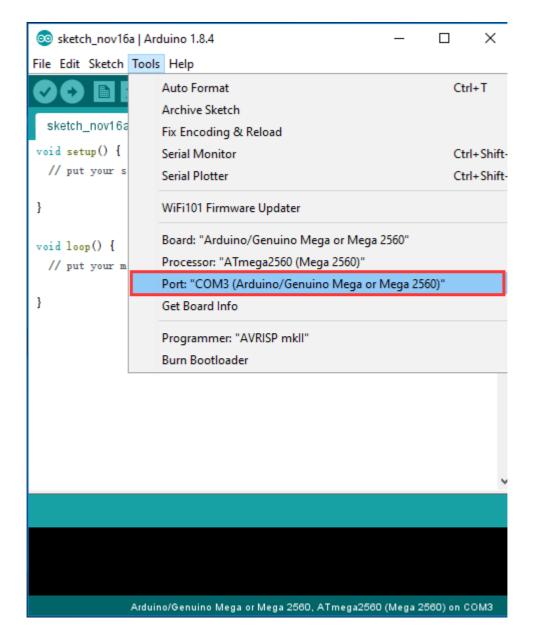

Step 8 : Put the object in front of uArm Swift Pro about 25cm away , OpenMV will recognize the object.

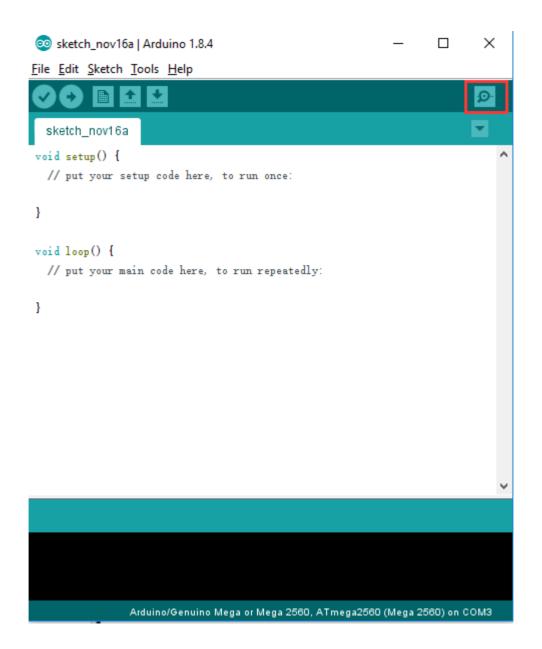

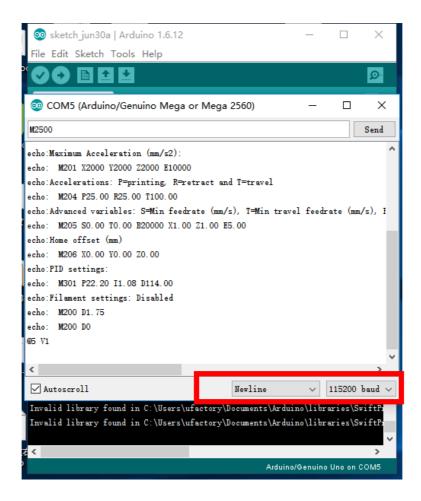

Step 9: Connect the USB port and power port of uArm, press the power button of uArm. Open the Arduino IDE (Download Arduino IDE https://www.arduino.cc/en/Main/Software), Choosing the right port: COM (Arduino/Genuino Mega or Mega 2560)

Step 10: Click the serial monitor button to open a serial monitor.

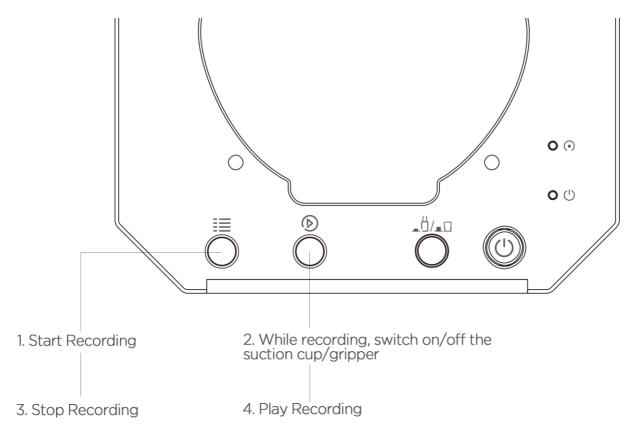

Step 11: Adjust the settings (newline & 115200 baud) and then send the M2500 command to switch the main UART port of uArm from USB to the port of OpenMV.

Step 12: Move the object slowly, and the arm will follow it.

Offline Learning Mode

Use buttons on the base to "teach" uArm by hand

TEACH:

- 1. Start learning mode. Press the 🗮 once, and the status indicator turns green.
- 2. Teach the robot manually. Press the \bigcirc once to turn on the end-effector, again to turn off. (If $_ \bigcirc /_$ is down end-effector is gripper, or it is pump. Please remember to keep the button up after learning or it will turn on the Bluetooth. Page 5)
- 3. Finish the learning process. Press \blacksquare once, and the status indicator turns off.

PLAY:

- One-time playback: Press Once, or Loop playback: press A hold for 2 seconds.
 The status indicator starts flashing green slowly.
- 3. Press (b) once to stop playing.

Software: uArm Studio (Win/Mac)

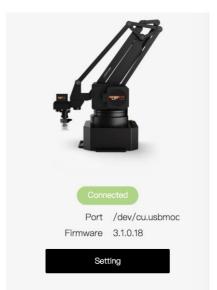

1. Download uArm Studio from:

http://www.ufactory.cc/#/en/support/

* Windows (Win7/8 or before) users will be reminded to install driver. Simply follow the instructions to install.

- 2. Device Connection
- 1) Plug in the power cable.
- $\mathbf{2}$) Press down the power button.
- 3) Connect uArm to your computer via USB.

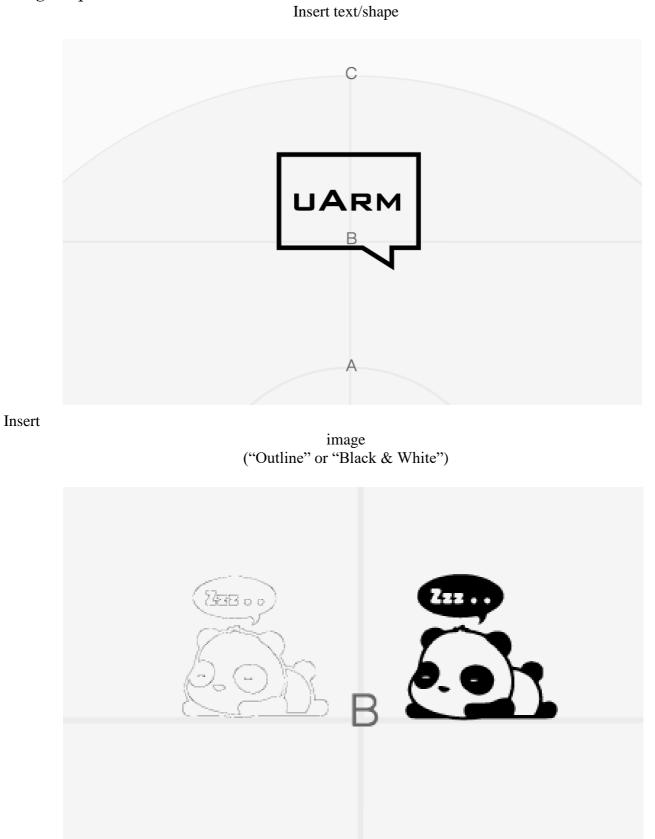

Status of device connection is displayed on home page. More info is displayed in "Setting".

3. Drawing/Laser Engraving

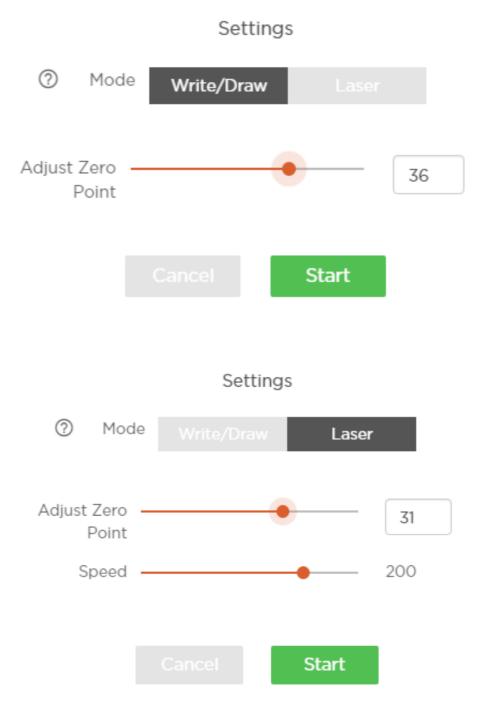

Design a pattern:

- 1) Click the play button to continue.
- 2) Adjust Zero Point

an

3) **IMPORTANT:** Please adjust zero point before drawing/engraving. Ensure the pen/laser is <u>TOUCHING</u> the platform. For laser engraving, you can also adjust the speed of engraving.

4) Start drawing/engraving!

4.3D Printing

Preparation

1) <u>Download CuraForuArm</u>

- 2) Double-click .dmg/.exe file to install.
- 3) Enter the 3D Printing section in Studio, and CuraForuArm window will pop up automatically. If not, click the "Open Cura" button.

5.Teach & Play: Learning Mode

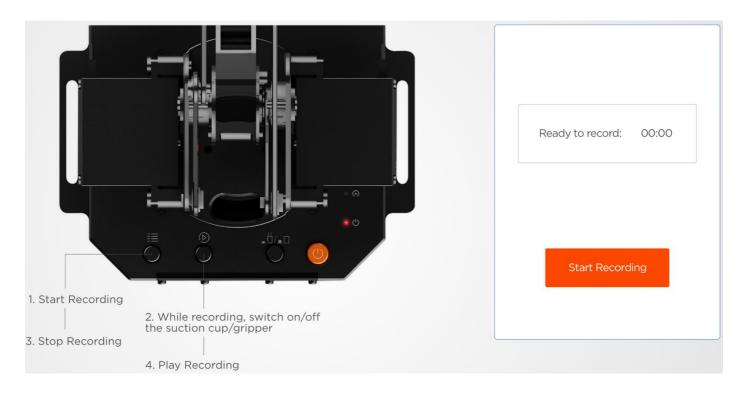

What is Teach & Play?

Teach uArm by hand, and then replay the recording anytime.

How?

1) Make a recording

- Click the "New Recording" button to start "teaching", OR,
- Use the buttons on the base (usage of the buttons is the same as that under "Offline Learning Mode").

2) Save your recording

Stopped	00:05			
Discard	Save			

3) Replay the recording in different speed and times

Stopp	ed	00:06	
Disca	rd	Save	
Speed Times Loop	1	•	1x
	Play		

What makes "Teach & Play" different from "Offline Learning Mode"?

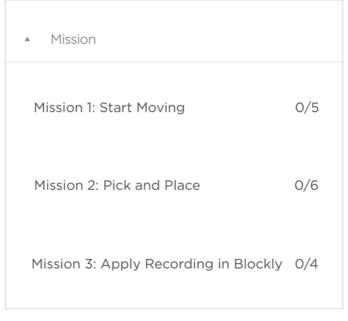

- 1) No time limit while "teaching" with uArm Studio.
- 2) You may save, export your recordings and import recordings made by others.
- 3) You may apply your recording in Blockly (visual programming interface, which is explained up next).

What is Blockly?

Blockly in uArm Studio is a visual programming interface specially designed for controlling uArm.

Getting Started

Three "missions" are prepared to get you through Blockly quickly. Please try them out!

What can you do with Blockly?

1) Control uArm's basic movements

e e	Move to	Position X	65	0 Y		150	Z		150	
F -	Suction Cu	p 🕻 ON 🖌	+	+ +	+	+	÷	÷	+ +	+
F -	? Move	up 🗕 🔰 50		+ +	+	+	+	•	• •	+
F	? Base tu	urn to 🗍 30	ŀ	• •	+	+	+	+	+ +	+
F -	Suction Cu	p 🜔 ON 📄	ŀ	• •	+	+	+	+	• •	+
P -		* * *	•	• •	+	+	+	+	• •	+

2) Change events (i.e. how you trigger commands)

+

		+	• •	+ +		+	+ +		+	+
Press Key 🗛 Do	Move to (Posi	tion X	(119) Y (-48	Ζ(123	•	+
	Beep (*	• •		*	+
	Gripper 🜗	ON		• •	+ +	+	• •		+	+
		+	• •			+	• •		+	+

.

3) Apply recorded movements

	When	face i	is re	ecogn	ised		+	+	+	+	+	+	+	+	+	+
	?	Play	Re	cordi	ng pi	ck a	and pl	ace	•	Spee	ed:	1 x	•	*	•	*
	Мо	ve to	G	Posi	tion >		119	Y	1	-49		ζſ	12	3		+
						+	+	+	+	+	+	+	•	+	•	+
· +	+ +	+	+	+		+	+	+	+	+	+	+	+	+	+	÷

4) Dig deeper into programming (functions, variables, etc.)

	*	* *	* *	· ·		*	+	*	+	+	+	+	+	+	+	*	+	+	+
+			with:	• •	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
+		iise ul	x ()	5	+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
+			× (+	+	+	+	+	+	+	+	+	+	+	+	+	+	+
÷	+	• •	+ +	• •	+	+	+	+	+	+	+	+	+	٠	+	+	+	+	+
+		2 ?	to raise		ith: v		+	+	+	+	+	+	+	+	+	+	+	+	+

Release Note

Version	Note	
1.0.7	Modify several steps of 3D printing and fix the misunderstanding	Tony
	Add the laser mode command G1	
1.0.8	Add more details about OpenMV	Tony
	Add the note of laser focusing	
	Add the caution of installing base extension	
	Add the caution of user defined button	
1.0.9	Modify the steps of laser focusing and grove installing	Tony
1.0.10	Add more details to OpenMV tutorial	Tony
	Add details to offline learning modess	
	Add M2500 command in command list	
1.0.11	Modify the OpenMV instructions	Tony
	Add more Gcode commands	
1.0.12	Add the details of installing the tube in 3D printing mode	Tony
1.0.13	Add new picture of working range	Tony
1.0.14	Add cautions in 3D printing	Tony
1.0.15	Modify several commands of Gcode	David
	Redesign the layout of this guide	ChengHan
